
The Prehistoric Zoo.

In the Fourth Day or Epoch « God made the two great Lights, » the Sun and the Moon. (Genesis 1 : 14-19.) It is not necessary to suppose that the Sun and the Moon were created after our Earth. Rather, up to this time they had not shone on the Earth because of the impenetrable veil which canopied it. The appearance of the Sun and the Moon on the Fourth Day implies that another ring broke at that time.

The carboniferous qualities of the water and the atmosphere having been absorbed into the cretaceous organisms of the sea, which formed beds of limestone, and into the rank vegetation which went to form the coal beds, the atmosphere of Earth began to be pure enough to permit life in breathing animals. To this period belong the amphibious developments of animal life, such as the crocodile. Birds belong to this period, and the great Mammoth and the Sloth

In Genesis 1 . 20. 21 we read : « Let the waters bring forth abundantly the moving creature that hath life, and fowl that may fly above the Earth » This is exactly in harmony with our scientific findings that the beginning of life came from the waters, and later extended to the birds, and later to land animals.
